

INSAF FINSER

Software Engineer — AI Applications — Full Stack Developer

insaffinser@gmail.com | +971 522579588 | +91 8139837601

github.com/Insaf-Finser | linkedin.com/in/insaf-finser | Portfolio

Professional Summary

Software Engineer specializing in AI applications, intelligent automation, backend engineering, and full-stack development. Experienced designing production-ready web and mobile applications using Python, FastAPI, React, Flutter, PostgreSQL, Firebase, and modern LLM frameworks. Strong background in machine learning, RAG systems, AI agents, and scalable REST API development with a passion for building developer tools and real-world AI solutions.

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, Dart

Frontend: React, React Native, Flutter, HTML5, CSS3, Tailwind CSS

Backend: FastAPI, Node.js, Express.js, REST APIs, SQLAlchemy

Databases: PostgreSQL, MongoDB, Firebase Firestore, SQLite

AI/ML: LangChain, LangGraph, CrewAI, RAG, OpenAI API, TensorFlow, Scikit-learn, LightGBM, SHAP, Prompt Engineering, AI Agents

Tools: Git, GitHub, Docker, Linux, Postman, Firebase, Cloudinary

Selected Projects

NeuroInk — AI Disease Detection Platform *React, TypeScript, Python, LightGBM, TensorFlow, Firebase*

- Engineered a Progressive Web Application for early diagnosis of Alzheimer's and Parkinson's disease using hand-writing biomarkers.
- Developed machine learning pipelines using LightGBM and Random Forest with SHAP explainability for transparent predictions.
- Integrated Firebase Authentication, secure patient management, and responsive dashboards.
- Designed an end-to-end workflow covering data preprocessing, model inference, and result visualization.

PromptLLM — Universal LLM Playground *Python, FastAPI, React*

- Built a unified platform for interacting with multiple Large Language Models through a single interface.
- Developed prompt management, conversation history, and configurable AI model selection.
- Designed a modular architecture enabling seamless integration of additional LLM providers.
- Implemented reusable backend APIs for scalable AI workflow management.

README Generator *Python, FastAPI, React, LLM APIs*

- Developed an AI-powered documentation generator for automatically creating professional GitHub README files.
- Generated project descriptions, installation guides, feature lists, badges, and usage documentation.
- Reduced manual documentation effort through prompt-engineered LLM workflows.

Questora — AI Interactive Storytelling Platform *Flutter, Firebase, React, AI APIs*

- Developed an AI-powered storytelling application that generates dynamic stories based on player choices.
- Implemented Firebase Authentication, cloud storage, and persistent game progress.
- Integrated AI image generation and branching narrative workflows for immersive gameplay.
- Built a companion React website showcasing the platform and its features.

Transfer — Secure Messaging Application *Flutter, Node.js, MongoDB*

- Built an encrypted messaging platform using AES encryption for secure communication.
- Implemented blockchain-based message hash verification to ensure message integrity.
- Developed real-time messaging backend and secure authentication workflows.

Experience

Flutter Developer Intern

Pragament Tech Solutions Private Limited

- Developed reusable Flutter UI components following modern mobile development practices.
- Integrated REST APIs and Firebase Authentication into production mobile applications.
- Collaborated using Git-based version control within an agile development workflow.
- Debugged application issues, optimized performance, and improved UI responsiveness.

Education

B.Tech in Computer Science and Engineering

Amal Jyothi College of Engineering (Autonomous)

CGPA: 8.85/10

Standard XII – 86% (CBSE)

Silver Hills Public School, Calicut

Standard X – 89% (ICSE)

St. Mary's English Medium School, Calicut

Certifications

- NPTEL — Introduction to Machine Learning
- NPTEL — Ethical Hacking
- Ethical Hacking Workshop — NIT Calicut

Relevant Coursework

Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence, Software Engineering.

Achievements

- Developed 8+ AI-powered web, backend, and mobile applications using modern LLM frameworks.
- Built projects spanning healthcare AI, developer productivity, intelligent automation, and secure communication.
- Maintained an active GitHub portfolio demonstrating full-stack software engineering and AI application development.

Additional Information

- Valid UAE Residence Visa (Family Sponsored)
- Open to Software Engineer, AI Engineer, Full Stack Developer, and Mobile Developer roles
